

Product Spec

Digital Fees Register

MVP / Proof of Concept

v5 · 2026-05-13

1. Problem Statement

One-line summary: The school records every fee payment three times — in the parent's Fee Book, in a daily white notepad, and in the master class register — and still has no real-time view of who has paid, who is in arrears, or how much has been collected.

Detail: The school has approximately 250 students from Nursery through Class 10, many of them billed in sibling family groups. For every single payment, the operator (the Principal, who performs both administrative and fee-collection duties in current paper operation) performs three separate manual write-ups: she fills in a slip in the parent's yellow Fee Book (tearing one half off for the school's six-month archive), writes the family name and amount in a daily white notepad, then opens the class register and writes the entry in the appropriate month-cell. Even online payments, which parents make via UPI apps and notify the Principal about by phone message, are recorded manually in the same three places. The triple-entry burden makes payment-recording slow, defaulter tracking reactive, and reconciliation a multi-hour exercise at month-end. The Principal has no consolidated, real-time view at all.

Why now: UPI is the default payment rail across India even for small-ticket transactions, and parents universally have smartphones with WhatsApp. At ~250 students the school has crossed the size where paper-based triple-entry is workable, but it is still small enough that heavyweight school ERPs are overkill. A focused tool that visually mirrors the paper register and Fee Book — and that records each payment exactly once across digital equivalents of all three artifacts — is the right intervention right now.

2. Background and Context

2.1 About the Client

A private school in India with approximately 250 students from Nursery through Class 10. Administration is led by the Principal, who also performs all day-to-day fee-collection duties — there is no separate fee-clerk staff member at this school. She is therefore the sole operator of the current paper workflow and is the primary user and decision-maker for this POC. A separate Clerk role is anticipated for the future (when the school hires dedicated office staff), but does not exist today.

A defining convention at the school: siblings from the same family are billed together as a single family unit in the class register and in the daily collection notepad. A family is anchored in the eldest sibling's class register, with younger siblings tagged in superscript by their actual class (e.g., "Raghav (VII)", "Anand (Nur)"). Notably, however, the parent-facing Fee Book is issued per student, not per family — so a 3-sibling family carries 3 separate Fee Books even though it appears as one row in the register and one entry in the notepad.

2.2 Current Workflow

The school operates with three physical artifacts for fee collection. Each one has a specific role; the Principal maintains all three concurrently for every payment received.

The three artifacts:

- Yellow Fee Book — a per-student booklet of pre-printed two-up perforated receipt slips, issued at the start of each academic session. The booklet stays with the parent.
- White notepad — a single notepad on the office desk that captures all collections day-by-day. Each entry is just "FamilyName — Amount" under a date header.

- Class register — the master ledger; one bound book with one row per student / family and 12 columns for Apr → Mar, plus columns for P.Dues, T.Fees, Monthly, and Exam.

Walk-in payment (the typical case): On a normal day, when a parent arrives at the office with cash, the Principal follows this exact order:

- Parent presents the yellow Fee Book and the cash amount.
- Principal fills in a Fee Book slip (date, student details, fee-head amounts, G. Total, signature) — both halves of the perforated slip. Tears off the outer half (the half closest to the paper edge) and retains it for the school's six-month archive. The inner half (closest to the binding) stays attached in the parent's book.
- Principal writes the family name and amount into today's page of the white notepad.
- Principal opens the class register and writes the entry into that student/family's row, into the appropriate month-cell.

On normal days the register is updated live, transaction-by-transaction. On busy days when the queue is too long, the live register update is skipped and the register is reconciled from the white notepad at end-of-day — making the notepad the safety-net source of truth on those days.

Online (UPI) payment: Parents can pay digitally via UPI apps (e.g., PhonePe). Today's flow is fully manual:

- Parent makes the UPI transfer.
- Parent sends a confirmation message to the Principal's phone (typically WhatsApp / SMS with a screenshot).
- Principal records the payment in all three artifacts (Fee Book, notepad, register), annotating the notepad entry as "online payment".

There is no automated reconciliation — every UPI payment requires the parent to message the Principal and her to manually transcribe.

Partial payment: If a parent can pay only part of the expected amount (e.g., ₹1,400 against an expected ₹2,900), the Fee Book slip is filled at the partial amount and the remaining ₹1,500 is written into the slip's printed "Dues" field. The same partial amount is recorded in the notepad and register; the family's outstanding balance reflects the unpaid portion.

New admission: When a new student joins, the Principal issues a brand-new Fee Book on the spot. The Admission Fee is recorded as the first slip in that book.

Year-end: At the end of each academic year, three things happen manually: (a) unpaid balances are copied by hand into the next year's register's P.Dues column for each family; (b) a fresh yellow Fee Book is issued to each student for the new session; (c) a new white notepad is started. The previous year's torn-off Fee Book halves are retained for six months for dispute resolution.

2.3 Pain Points

- Triple-entry burden: every payment, including online ones, is written by hand in three places (Fee Book + notepad + register). This is the dominant time cost in the workflow.
- No real-time view: the Principal cannot answer "how much have we collected this month?" without physically tallying the register herself.
- UPI payments require manual reconciliation triggered by a parent's phone message; the school has no automated way to detect or record an online payment.
- Defaulter tracking is reactive — families often go 1-2 months overdue before anyone notices, because spotting them requires scanning the register class by class.
- Manual receipts are slow to fill, prone to numbering errors, and the school's archive is a stack of paper halves that's not searchable.
- Sibling tracking is informal: superscript class tags are written in pen and become inconsistent when a sibling changes class or a new admission joins the family.

- Year-end roll-over (manually copying P.Dues into a fresh register for ~250 families) is hours of error-prone transcription.
- If the register or notepad is damaged or lost, the school has no backup of the year's fee history — only the parent's Fee Book stub remains.

2.4 Existing Alternatives

Full school-ERP (Enterprise Resource Planning) products such as ERPNext Education, Vidyalaya, Fedena, and Classe365 cover this need but are heavy: they require training, charge per-student fees that are uneconomical at this scale, and bundle modules (attendance, marks, payroll, transport) the school does not need today. Generic accounting tools like Tally or QuickBooks are not designed around per-student dues, let alone family-grouped dues with per-student receipt books. Spreadsheets in Excel / Google Sheets are tried occasionally but break down because they offer no receipt generation, no parent-facing payment, no SMS / WhatsApp delivery, no role separation, and no native concept of a "family unit" or per-student Fee Book. The market gap is a focused, low-friction "three-artifact replacement + UPI" tool sized for a 200–500 student school.

2.5 Reference: printed fee-head taxonomy (Fee Book slip)

These are the fee heads pre-printed on every Fee Book receipt slip. The digital fee-structure setup uses these exact head names — preserving them avoids retraining and keeps digital receipts visually consistent with paper ones.

Printed head	Meaning	Frequency
Tuition Fee	Monthly tuition, per class rate (e.g., Class 10 ₹1,500; Class VII ₹1,400).	Monthly
Admission Fee	One-time fee at new admission.	One-time
Examination Fee	Term exam (Sep) and pre-board exam (Feb) fees, ₹400 each for Class 10.	Specific months
Late Fine	Late-payment penalty after the due date.	Conditional
Annual Charge	Once-per-year non-tuition charge (₹1,500 for Class 10).	Annual
Back Dues	Arrears carried over from a previous academic year.	Carried over
Dues	Remaining unpaid balance on the current payment cycle (used for partial payments).	Conditional
G. Total	Grand total of the slip.	Auto

2.6 Reference: Class 10 fee structure (2026-27)

The Principal's confirmed structure for Class 10 in the current academic year — the canonical worked example for the POC. Class VII tuition is ₹1,400/month; other classes' structures are TBD and will be loaded by the Principal into the system after MVP UAT passes.

Fee head (printed)	Amount (₹)	Frequency	When billed
Tuition Fee	1,500	Monthly × 12	Every month, Apr → Mar
Annual Charge	1,500	Once per year	Beginning of academic year
Examination Fee	400	Once	September (term exam)

Examination Fee	400	Once	February (pre-board exam)
TOTAL / year	20,300	—	Per Class 10 student

3. Solution Approach

High-level summary: Build a web-based Digital Fees Register that progressively replaces the school's three paper artifacts. v1 (the 7-day MVP) replaces ONLY the master class register — the Principal records every Class 10 fee payment in the app instead of writing it into the register book. The paper Fee Book slip for parents continues unchanged in v1; v2 closes that loop by generating PDF receipts and delivering them via WhatsApp / Email / Print. v3 and later add UPI auto-reconciliation, parent self-service, reports, defaulter outreach, and year-end roll-over. The POC is sized for a single school of ~250 students, with no multi-branch, ERP, or non-fee modules.

Design principle (rapid adoption first): The register grid must look like the paper register the Principal already uses, down to the column order and short labels ("P.Dues", "T.Fees", "Monthly"). She should be able to record a typical payment without explanation on first sight of the screen — that is the v1 adoption test. v2's PDF receipt will likewise mirror the school header and fee-head order parents already see on paper.

3.1 In scope (full product vision)

This is the full product the spec describes. v1 ships only a small slice — see Section 3.4 for the mapping of which features land when.

- Two paired collection-entry views: (a) register grid (mirrors paper register), (b) "Today's collections" linear view (mirrors notepad). Both are projections of one ledger.
- One save → updates digital receipt + day's log + register simultaneously. No double-entry.
- PDF receipt with school header, sequential receipt number, and fee-head taxonomy preserved.
- Family / billing-unit data model: families contain 1+ students; family is the unit of register/notepad display, student is the unit of receipt and Fee Book.
- Per-class fee structure setup using the Fee Book's printed heads (Tuition / Admission / Examination / Late Fine / Annual / Back Dues), with per-family concessions.
- Cash payment entry with auto-allocation suggestion (oldest dues first; operator can override) and partial-payment support with Dues tracking.
- UPI payment link sent per family via WhatsApp; payment via hosted gateway (Razorpay); auto-reconciliation — no manual confirmation step.
- Auto-delivery of receipts to parents over WhatsApp / Email for both cash and UPI payments.
- Principal dashboard: collected vs. outstanding (MTD, YTD), class-wise breakdown, payment-mode split.
- Defaulter list with bulk WhatsApp reminders at the family level.
- Monthly and term-wise collection reports (PDF + Excel).
- New-admission flow: Fee Book issued digitally on the spot; first Admission Fee receipt generated immediately.
- Year-end roll-over: one-action close-out — auto-carry Back Dues, archive last year, start new year with a fresh ledger and Fee Book sequence.
- Roles: Admin (full access), Clerk (entry + receipts only), Viewer (read-only), Parent (read-only of own child).

3.2 Out of scope (future)

- Other school modules: attendance, marks, timetable, payroll, transport, hostel, library.
- Native mobile apps (web is mobile-responsive instead).

- Multi-branch / multi-school management.
- Bank-statement upload and auto-reconciliation of NEFT / IMPS payments (UPI gateway covers the common online case).
- Cheque-clearance workflow (cheques are out of scope; cash + UPI only).
- Parent self-service portal beyond payment link + receipt view (e.g., login to view full ledger / download all past receipts).
- GST invoicing, accounting integration with Tally, or auditor-grade ledger exports.
- SMS fallback for parents without WhatsApp.
- Thermal printer / pixel-aligned printing onto pre-printed Fee Book paper.

3.3 Roles

Long-term role model is four roles. MVP ships only two; the others are deferred (see Section 3.4).

Role	Privileges	Status
Admin (Principal)	Full CRUD on families, students, receipts (including void). Sole user in v1.	v1 (MVP)
Clerk	Add + read + update payments. No delete. No fee-structure edits.	v2+ — ships when school hires separate office staff.
Viewer	Read-only access to the dashboard. No write privileges.	v2+ — ships when a committed third-party watcher exists.
Parent	Read-only access to their own child's fee history and receipts; phone OTP login.	V3 / future.

v1 ships only the Admin role. The Principal performs all admin and fee-clerk duties herself, because no separate fee-clerk staff exists at the school today. Clerk, Viewer, and Parent roles activate later when there are committed users for each.

3.4 MVP scope mapping (which user stories ship when)

All user stories below (US-01 through US-14) describe the full product. This table shows the release phase for each.

US	Title	v1 (MVP, 7 days)	v2 / Week 2	V3+
US-01	Live collection dashboard	Minimal — 3 cards (Today, This Month, Outstanding) for Class 10 only	Class-wise breakdown, last-N entries, defaulter view, filters	
US-02	Defaulter list + reminders		✓	
US-03	Collection reports (PDF/Excel)		✓	
US-04	Register-style grid view	✓ (Class 10 only) — primary v1 surface	Other classes; family-row expand	

US-05	"Today's collections" linear view		✓	
US-06	Single save replaces three artifacts	Partial — digital register replaces the paper register only. Paper Fee Book continues. Full three-artifact replacement when US-07 + US-11 land in v2.	✓ (full replacement when receipts ship)	
US-07	Digital receipt (clean A5)		✓ — PRIORITY 1 in v2	
US-08	Partial payment with Dues tracking	✓ — amount < monthly_fees → cell turns yellow	Auto-allocation suggestion	
US-09	Per-class fee structure setup	Class 10 monthly fees stored on families table (family-level). Per-class fee_structures table arrives with v2.	Per-class fee structure form + other classes	
US-10	UPI with auto-reconciliation		✓ (Razorpay)	
US-11	Receipt delivery to parent		✓ — WhatsApp + Email + Print all in v2	
US-12	Student / family management	Seeded via Supabase dashboard (no admin form in v1)	✓ — admin form for family CRUD	
US-13	New admission — issue Fee Book on the spot			✓
US-14	Year-end roll-over			✓

v1 is intentionally minimal — only the digital register itself. Receipt delivery to parents (US-07, US-11), admin forms (US-12), and most dashboard depth (US-01 details) all move to v2. Parents continue to receive the paper Fee Book slip during v1, unchanged. The trigger for v2 work is a successful Day-7 UAT (the Principal runs a full morning of real collections digitally) and her explicit request to expand.

4. User Stories

Format: As a [role], I want to [action], so that [benefit]. The "role" column uses the long-term role model from Section 3.3; in v1 the Principal performs all Admin-and-Clerk actions herself.

ID	As a...	I want to...	So that...
US-01	Principal	see a live dashboard of fee collection vs. dues across all classes	I know at any moment how much money has come in and what is outstanding.
US-02	Principal	view a defaulter list with one-click reminder via WhatsApp	I can chase pending fees without manually combing through the register.
US-03	Principal	generate monthly and term-wise collection reports as PDF / Excel	I can share clean reports with the trustees and auditor.
US-04	Operator (Admin / Clerk)	open a register-style grid view that mirrors the paper register class-by-class	I can find a student / family the same way I do today,

			without retraining.
US-05	Operator (Admin / Clerk)	use a fast "Today's collections" entry view that mirrors the white notepad workflow	I can record walk-in payments as fast as I do on paper today.
US-06	Operator (Admin / Clerk)	save one digital payment that updates the receipt, the day's log, and the register simultaneously	I never have to write the same payment in three different places again.
US-07	Operator (Admin / Clerk)	auto-generate a PDF receipt that carries the school header and fee-head order parents recognise	the receipt is instantly familiar to parents and the operator doesn't have to fill paper slips.
US-08	Operator (Admin / Clerk)	record a partial payment with the remaining amount captured as Dues	the school can accept any amount the parent can pay today and track what's still owed.
US-09	Admin (Principal)	set the per-class fee structure using the Fee Book's printed heads (Tuition, Annual, Examination, etc.)	the digital fee structure matches the heads parents already see on their receipts.
US-10	Parent	pay fees online via a UPI link and have the school's records update automatically without me calling anyone	I don't have to message the Principal or wait for confirmation that my payment was recorded.
US-11	Parent	receive a digital receipt on WhatsApp / Email immediately after any payment (cash or UPI)	I have permanent proof of payment without depending on a paper book I might lose.
US-12	Admin (Principal)	manage students, sections, and family groupings (with per-student Fee Books and per-family register rows)	the digital system reflects how the school actually thinks about students and families.
US-13	Admin (Principal)	issue a digital Fee Book to a new admission on the spot, with payments accepted from day one	new families have the same experience as existing ones from their first day.
US-14	Admin (Principal)	roll over to a new academic year in one action — auto-carry Back Dues, archive last year, start new logs	year-end transcription stops being a manual, error-prone exercise.

5. Acceptance Criteria

Each criterion maps to a user story and defines when it is considered done. The MVP slice covers US-01 (Class 10 only), US-04 (Class 10 grid only), US-06, US-07, US-08, US-09 (Class 10 setup via form), US-11 (WhatsApp + Email + Print), US-12 (CRUD form, Class 10 only). The rest land in week 2 or V2 per Section 3.4.

US-01 — Live collection dashboard

ID	Acceptance Criterion	Priority
AC-01	Dashboard loads on the Admin's login and shows: total collected (MTD, YTD), total outstanding, % collection vs. expected.	High

AC-02	Class-wise breakdown shown as a table or bar chart (Nursery → Class 10), with collected vs. outstanding for each class.	High
AC-03	Dashboard refreshes within 5 seconds of any new cash entry or UPI confirmation (via Supabase Realtime).	Medium
AC-04	Filters: academic year, term, fee head (Tuition / Admission / Examination / Annual / Late Fine / Back Dues).	Medium

US-02 — Defaulter list and reminders (Week 2)

ID	Acceptance Criterion	Priority
AC-05	Defaulter list shows one row per family: family name, lead student, class, parent contact, outstanding amount, days overdue, last reminder date.	High
AC-06	List can be sorted by overdue amount or days overdue and filtered by class.	High
AC-07	Bulk-select families and send WhatsApp reminder with payment link in one click; the link covers all siblings in the family.	High
AC-08	Last reminder timestamp is logged per family and visible in the list.	Medium

US-03 — Collection reports (Week 2)

ID	Acceptance Criterion	Priority
AC-09	Admin can generate a monthly collection report (date range selectable) as PDF and Excel.	High
AC-10	Report includes: opening dues, collected, outstanding, fee head split, payment-mode split (cash vs. UPI).	High
AC-11	Term-wise and academic-year reports are available as preset templates.	Medium
AC-12	Report header includes the school name, logo, and the date range; footer includes operator name and generation date.	Low

US-04 — Register-style fee grid view

ID	Acceptance Criterion	Priority
AC-13	Default screen for the operator is a grid with the same column order as the paper register.	High
AC-14	Column labels use the register's exact short labels — "P.Dues", "T.Fees", "Monthly" — not expanded forms.	High
AC-15	A class + academic-year selector at the top of the grid mirrors the title row of the paper register (e.g., "Class X 2026-27").	High
AC-16	Family rows display with the format "Sibling1 + Sibling2 + Sibling3"; sibling class tags shown in superscript like the book.	High (Week 2)
AC-17	Grid shows ~15-20 rows per screen at desktop density, matching the visual density of an open register spread.	Medium
AC-18	Clicking a family row expands inline to show individual siblings and their per-child dues.	Medium (Week 2)

US-05 — "Today's collections" linear view (Week 2)

ID	Acceptance Criterion	Priority
AC-19	A second view, "Today's collections," presents a date-headed list of payments recorded today — visually echoing the white notepad page.	High (Week 2)
AC-20	Operator searches for a family / student (admission no., name, or class+roll), enters the amount, and saves — entire flow under 15 seconds.	High (Week 2)
AC-21	On save, the entry appears at the top of today's list with: family name, amount, mode (Cash / UPI), and time.	High (Week 2)
AC-22	Same data is reflected immediately in the register-grid view (US-04) — both views are projections of one ledger.	High (Week 2)
AC-23	End-of-day total of today's collections is shown at the top of the view, matching what the operator currently tallies on paper.	Medium (Week 2)

US-06 — Single save replaces three artifacts

ID	Acceptance Criterion	Priority
AC-24	One save action records: (a) the digital receipt for the parent, (b) the day's collection log entry, (c) the class register's month-cell update — all atomically.	High
AC-25	The operator never has to re-enter the same payment in a second screen.	High
AC-26	If any one of the three updates fails, the entire save is rolled back and the operator sees a clear error.	High
AC-27	Auto-allocation: when the paid amount exceeds one month's tuition, the system suggests a month-and-fee-head allocation (oldest dues first); operator can confirm or override.	High (Week 2)

US-07 — Digital receipt

ID	Acceptance Criterion	Priority
AC-28	On save, system generates a clean A5 PDF receipt with the school header, fee-head order parents recognise, and the same field names as the paper Fee Book slip. v1 is not pixel-aligned to the pre-printed Fee Book booklet — that is a Week 2 consideration if needed.	High
AC-29	Receipt contains: school name + U-Dise code, sequential receipt number, date, student details (Admission No, Name, Class, Section, Roll No, Father's Name if present), "Fee for the Month of", fee-head split, G. Total, mode (Cash / UPI), operator name.	High
AC-30	Receipt numbers are gap-free and immutable; voided receipts are marked CANCELLED with a void_reason, not deleted. Corrections are made by void + reissue.	High
AC-31	Receipt is downloadable by the operator and (when contact is on file) auto-sent to the parent via WhatsApp / Email — no manual send step.	High

US-08 — Partial payment with Dues tracking

ID	Acceptance Criterion	Priority
AC-32	Operator can enter a payment amount less than the expected month's total; system saves it and writes the remainder into the "Dues" field on the receipt.	High
AC-33	The family's outstanding balance increases by the unpaid portion and is visible on the dashboard.	High
AC-34	Receipt clearly shows the partial amount paid and the remaining Dues, matching how the paper Fee Book records it today.	High
AC-35	Subsequent payments toward the same dues automatically reduce the outstanding amount.	Medium

US-09 — Per-class fee structure setup

ID	Acceptance Criterion	Priority
AC-36	Admin can define fee heads per class using the Fee Book's printed taxonomy: Tuition Fee, Admission Fee, Examination Fee, Late Fine, Annual Charge, Back Dues.	High
AC-37	Each Examination Fee entry can be tied to a specific month (e.g., Sep ₹400, Feb ₹400 for Class 10).	High
AC-38	Class 10 reference structure (Tuition ₹1,500/mo + Annual ₹1,500 + Sep Exam ₹400 + Feb Pre-board ₹400 = ₹20,300/yr) and Class VII Tuition ₹1,400/mo can be entered and saved as worked examples.	High
AC-39	Concessions can be applied at the family level (fixed amount or percent), supporting the school's existing sibling-discount practice.	High (Week 2)
AC-40	Fee structure is versioned by academic year; changes do not retroactively affect closed years.	Medium (Week 2)
AC-41	Late-fee rule: optional fixed amount or percent applied automatically after a configurable due date; surfaced as a Late Fine line on the receipt.	Low

US-10 — UPI with auto-reconciliation (Week 2)

ID	Acceptance Criterion	Priority
AC-42	Parent receives a UPI payment link per family via WhatsApp; link opens a mobile-first page listing all siblings and outstanding amounts.	High (Week 2)
AC-43	Payment is processed via a UPI gateway (Razorpay) — no app install required.	High (Week 2)
AC-44	On successful payment, the system automatically: (a) generates the digital receipt (US-07), (b) appends to today's collection log marked as "UPI", (c) updates the register, (d) updates the dashboard — all within 60 seconds without any operator action.	High (Week 2)
AC-45	Eliminates the current step where the parent calls / messages the Principal to confirm an online payment.	High (Week 2)

AC-46	Failed / refunded payments do NOT trigger a receipt; parent is notified of the failure with a retry link.	High (Week 2)
-------	---	---------------

US-11 — Receipt delivery to parent

ID	Acceptance Criterion	Priority
AC-47	Within 60 seconds of any successful payment, a receipt PDF is sent to the parent via WhatsApp (primary). Email is available as an alternate. Print is available as a fallback when the parent has no WhatsApp.	High
AC-48	If WhatsApp delivery fails or the parent has no WhatsApp number on file, the operator captures the number inline at first receipt; if unavailable, the parent is given a printed copy.	Medium
AC-49	Parent can re-download any past receipt via a link (no login required for the family's own receipts).	Medium

US-12 — Student & family management

ID	Acceptance Criterion	Priority
AC-50	Each student record carries: Admission No, Name, Class, Section, Roll No, Father's Name (optional), Mob, Date of Issue (admission date for the session), and a per-student Fee Book ID.	High
AC-51	Family unit groups 1+ students; family record carries family name, primary parent contact, primary class anchor (the eldest sibling's class).	High
AC-52	Family is the unit of register-row display and notepad/today's-collections entry; student is the unit of Fee Book and per-child receipt.	High
AC-53	Admin form supports bulk operations: in v1, ~28 Class 10 students are seeded directly via the Supabase dashboard. Bulk Excel import is a Week-2 enhancement.	High (v1 via dashboard; Excel import Week 2)
AC-54	Sibling class tags display as superscript on the family row (e.g., "Raghav (VII)").	Medium (Week 2)
AC-55	A family can be split (siblings separated) or merged, with audit trail.	Medium (Week 2)
AC-56	Withdrawn / TC-issued students are archived (status = 'withdrawn'), not deleted, and excluded from current dues.	Medium

US-13 — New admission flow (Week 2)

ID	Acceptance Criterion	Priority
AC-57	Admin can create a new student record in under 60 seconds from a single screen.	High (Week 2)
AC-58	On save, the system immediately issues a digital Fee Book (a unique receipt-numbering sequence and a printable cover page mirroring the paper book).	High (Week 2)
AC-59	The Admission Fee head is auto-billed on creation (configurable per class);	High (Week

	first payment can be recorded against it immediately.	2)
AC-60	If the new student joins an existing family, the Admin can attach the new student to that family unit at creation time.	Medium (Week 2)

US-14 — Year-end roll-over (Week 2)

ID	Acceptance Criterion	Priority
AC-61	Admin can trigger "Start New Academic Year" — closes the current year, archives all data, and opens a fresh register for the new year.	High (Week 2)
AC-62	Unpaid balances at year-end are automatically carried into the new year's P.Dues column for each family — no manual transcription.	High (Week 2)
AC-63	All students are auto-promoted to the next class; Admin can override individual exceptions (e.g., student withheld, transferred).	High (Week 2)
AC-64	A new digital Fee Book sequence is started for each student for the new session; the previous year's Fee Book remains accessible read-only.	High (Week 2)
AC-65	The previous year's collection log is archived and accessible for the principal's 6-month dispute-window need (and beyond, as digital archives have no shelf-life cost).	Medium (Week 2)

— End of Spec —
