

DIGITAL FEES REGISTER

Custom software used to be out of reach for most organizations.

Not anymore.

A fees register web app for a school - designed, built, and delivered end to end by one person, working with AI.

Live demo: fees-register-demo.vercel.app · Code: github.com/piyush0707/digital-fees-register

THE PRODUCT

The paper register, digitized - column for column.

Same rows, same columns, same mental model as the school's own register. Zero retraining.

How it was built

- 1 [Product spec](#) - the problem, the client, the scope
- 2 [Technical spec](#) - data model, offline-first architecture
- 3 Clickable mockup - reviewed with the client before any app code
- 4 Build - one screen at a time, audited against the mockup
- 5 Live demo with synthetic data - second client feedback
- 6 Real data and handoff - final feedback
- 7 Training sessions and voice-of-customer capture - twice a week, for 4 weeks
